

Break your own hypothesis with Bright Data — in one evening

Twenty minutes of calm on the cushion. Then the day happens — and you snap at your kid anyway.

SERP API • Web Scraper API • Web Unlocker • a Node script • a coding agent • a product idea I was too attached to

Every product starts as a belief. Mine had two parts.

H1 · Overwhelm

Meditation apps bury people in content and choice. Ten thousand sessions, streaks, paywalls, a guru for every mood.

H2 · The gap

The calm stays in the session. Twenty minutes on the cushion — then the same snap, the same second plate, the same 2am scroll.

The bet · Moment

One sentence about how you want to move through today. A pause every 30 minutes. One minute to breathe and choose again.

Meditation inside the day, not beside it. That was the bet. But a bet is not a business — so before telling anyone, I asked the web to break it.

I asked the web to prove me wrong. Three calls did the asking.

```
// 1 · SERP API — Google, parsed for you
POST api.brightdata.com/request
{ zone: SERP_ZONE, format: "raw",
  url: "google.com/search?q=...&brd_json=1" }
→ { organic:[{rank,title,link,description}],
    people_also_ask:[...], related:[...] }

# served: 146 search rows (17 queries) +
# 30 reddit threads via site:reddit.com/r/...
```

```
// 2 · Web Scraper API — structured, async
POST /datasets/v3/trigger?dataset_id=gd_m6zagkt...
  [{ url: ".../details?id=com.calm.android" }, ×3]
→ { snapshot_id }
GET /datasets/v3/progress/{id} (poll)
GET /datasets/v3/snapshot/{id}?format=json
→ [{ review_rating, review, reviewer_name, ... }]

# served: 300 reviews · 100 per app · 179 s · 0 errors
```

```
// 3 · Web Unlocker — any URL, blocks handled
POST api.brightdata.com/request
{ zone: UNLOCKER_ZONE, url, format: "raw" } → body
# served: play.google.com 3/3 · 200 OK · ~1.2 MB
# refused: apple + reddit hosts (KYC) → fallbacks
```

The rule that makes it a test

Every output file records which path served it (`via`). Apple's 450 reviews came from Apple's public feed, not Bright Data — and the page says so. Errors arrive as HTTP 200 with the truth in x-brd-error-code; surface it, never JSON.parse blindly.

Search only for people who agree, and the web will agree.

```
const QUERIES = {
  gap: [ "meditate every day but still reactive",
        "meditation doesn't carry over into daily life",
        "site:reddit.com/r/Meditation still reactive after years" ],
  want: [ "how to stay mindful throughout the day",
          "set an intention for the day and get reminded" ],
  competition: [ "mindfulness bell app random reminders",
                 "one minute meditation reminder app" ], // ← to hurt
};
for (const q of all) rows.push(...(await serp(q)).organic);
```

Two tricks

Bucket the queries: gap / want / competition. A third of them must be able to refute you, or you are doing marketing, not research.

site: through SERP: reddit.com is KYC-gated on the Unlocker. `site:reddit.com/r/Meditation ...` through the SERP zone gives you titles + snippets of the exact threads — no KYC, no HTML.

H1: people ask for less. H2: the calm really does stay on the cushion.

210 NEGATIVE APP STORE REVIEWS · SRC/CLUSTERS.JS

Google Play, second API, same regexes: 54% · 11% · 14% of 153 negatives.
Two stores, two APIs, one shape.

“Some days I don’t want to discover something new, I just want to return to a old favorite. ... I want a calming app to be calming.”

HEADSPACE · GOOGLE PLAY · AUG 2026 · VIA WEB SCRAPER API

“meditation helps me identify when I am not being present, However, when another same trigger arose, I was still reactive.”

R/MEDITATION · VIA SERP

“In order to change your behavior, you need to begin to bring your meditative mindset into daily life when you are in the act of making decisions...”

R/MEDITATION · VIA SERP

The web refuted my positioning. The interrupt and the minute both already exist.

- **Mindfulness Bell · MindBell · Chill**
interval or random bells, all day
- **One-Moment Meditation®**
one-minute exercise + reminders — and a registered mark
- **Insight Timer**
owns the SERP for “one minute meditation reminder app”

WHAT NO RESULT OFFERS — FOUND BY A “WANT” QUERY

*“My morning yoga includes setting an intention for the day...
23 minutes later I'm in the thick of...”*

R/SELFIMPROVEMENT · #1 ORGANIC RESULT · VIA SERP

**Remembering your own sentence at the moment it matters.
The bell is taken. The minute is taken. The intention is not.**

This slide is the ROI of the research: a positioning I would have shipped wrong, and a trademark collision, both caught for a few dollars of API calls.

THE WAY · THE DATA SHARPENED THE PRODUCT

THE SHARPENED PRODUCT

Not a reminder app. Not a meditation library.

WHAT THE WEB SAID

52% paywall fatigue · 17% lost simplicity · 16% choice overload

“when another same trigger arose, I was still reactive”

the bell is taken · the minute is taken (One-Moment Meditation®)

“23 minutes later I'm in the thick of...”

WHAT MOMENT BECAME

→ One sentence. Nothing to choose, nothing to unlock.

→ A pause every thirty minutes — inside the day, not beside it.

→ Not a bell. It hands you back your own sentence.

→ One minute to breathe — and choose again.

One intention. One minute. In the moment it matters.

Let's ask the web something from this room.

```
$ node src/ask.js "how to remember my intention for the day"

▶ POST https://api.brightdata.com/request
  { zone: SERP, url: google.com/search?q="how to remember my intention for the day"&brd_json=1 }

8 organic results · 1445 ms · parsed by Bright Data, zero HTML touched

#1 How to remember my set intention for the day?
  https://www.reddit.com/r/selfimprovement/comments/1llqrl4/how_to_remember_my_set_intention_for_the_day/
  "My morning yoga includes setting an intention for the day (a one-word mantra, or guiding
  principle, if you will). 23 minutes later I'm in the thick of ....."
#2 How do I remember my intention throughout the day? - StillMind
#3 The power of setting intentions & how to set mindful ones - calm.com

people also ask → How do I set my intention for the day? · What are my intentions for the day?
```

Take a query from the room. Run it. Read the #1 result out loud. That is the whole method — the rest is a loop.

The research object is injected straight into the page. Then the page asks you for one sentence.

```
{ "sources": [ { api, what, from } ×3 ],  
  "quotes": [ { text, src } ×5 ],      // verbatim  
  "clusters": [ { pct, label, of } ×3 ], // computed  
  "hypothesis": { H1, H2,  
                  verdict: { H1, H2, pushback } },  
  "counter_evidence": [ ... ],  
  "meta": { corpus, method, attribution } }  
// verify.js checks all of it before a republish
```

- The noise
- The bet
- Prove me wrong · three calls
- Half held, half pushed back
- The sharpened product
- One sentence · six breaths · choose again

Write one sentence about how you want to move through tonight. Sixty seconds. Six breaths. Halfway through, the sentence comes back. Then: now choose again.

Do this to your own idea tonight.

1 · Two sentences of hypothesis

and three queries that would kill it.

2 · Three APIs, each for its job

SERP with `brd_json=1` · site: your community ·
Web Scraper for the rows · Unlocker for the
page.

3 · Keep it honest

verbatim quotes, computed numbers, credit
the path that served.
